MODEL OF THE WEEK

A floating tee on a lake does $600k a year.

Here's the model. It runs on every par 3 on earth.

$1

One ball. One shot at a tee floating on a lake.

Hole it, win $10,000.

THE NUMBERS

$600k

Someone reverse-engineered one pontoon in the US.

A lakeside version in New Zealand does about $650k.

SAME MODEL, BIGGER STAGE

LIV Golf. HSBC. Bryson hitting into Victoria Harbour.

One hole-in-one activation. A global bank paid for it.

Sell a cheap shot at a big prize. Insure the prize. Put it where people already are.

OUR VERSION

R50

A swing at R1 million on a par 3 in South Africa.

30+ courses. Every prize underwritten by Santam before anyone swings.

Zero cost. Zero risk. Zero admin.

They get a share of every swing. We bring the cameras, the signage and the insurer.

Golfers don't buy the odds. They buy the story for the 19th.

R50 is a no-brainer. R500 is a dare. Both sell.

END

Simple enough for a 10-year-old. Big enough for every par 3 on earth.

That's the kind of business I like. Launch, learn, repeat.
