MODEL OF THE WEEK

A floating tee on a lake does *$600k* a year.

Here's the model. It runs on every par 3 on earth.

Johannes le Roux.

Swipe →

$1

One ball. One shot at a tee floating on a lake.

Hole it, win $10,000.

$600k

Someone reverse-engineered one pontoon in the US. About $600k a year.

A lakeside version in New Zealand does about $650k.

LIV Golf. HSBC. Bryson hitting into *Victoria Harbour.*

One hole-in-one activation. A global bank paid for it.

THE MODEL IN ONE LINE

Sell a cheap shot at a big prize. Insure the prize. Put it where people *already are.*

R50

R50 buys a swing at R25,000. R1,000 buys a swing at R1 million.

30+ courses in South Africa. Every prize underwritten by Santam before anyone swings.

Zero cost. Zero risk. *Zero admin.*

They get a share of every swing. We bring the cameras, the signage and the insurer.

Golfers don't buy the odds. They buy the story for the *19th.*

R50 is a no-brainer. R1,000 is a dare. Both sell.

LAUNCH, LEARN, REPEAT

Simple enough for a 10-year-old. Big enough for every par 3 on earth.

That's the kind of business I like.
